

## Main Features

- Excellent repeatability
- Dead band adjustment for regulation
- Fix dead band for control and alarm
- Overpressure up to 100 bar
- Explosion proof Hazardous areas 1, 2, 21, 22

## Applications

- Power generation safety equipment
- Pressurized chambers control
- Liquid level control

## Technical Data

Pressure range	-1 ... 2.5 bar to 0.2 ... 4 bar	Ground connection	Via internal terminal block
Temperature	Process: -50 ... +200 °C Ambient: -20 ... +55 °C Storage: -40 ... +70 °C	Electrical connection	Terminal block with metallic cable gland for Ø 7 to 12 mm standard
Repeatability	± 1% F.S. / constant pressure cycle	Electrical function	See ordering code details on page 5
CE conformity	Low Voltage Directive LVD 2006/95/EC ATEX Directive 94/9/EC	Adjustment	2 external adjustment screws on top of the case for set point and dead band

Scale	Internal. Accuracy on reading ± 5% F.S.		
Housing	Type RA80, explosion proof, flameproof Aluminium epoxy painted. Captive stainless steel screws		
Mounting	3 back lugs for wall mounting		

## Options

Customer specific set point adjustment	Code SETP
Oxygen application	Code 0765
Lead seal of the adjustment screws	Code 8990
Mounting on 2" pipe	Code 0407
Stainless steel tag plate and wire	Code 9941

## Principle

A flexible sensing element actuates a microswitch by means of a lever. The set point is adjusted by means of a compressible spring installed in opposition.

Set point and reset point must be between 10% and 90% of the selected scale.

### Standard factory adjustment

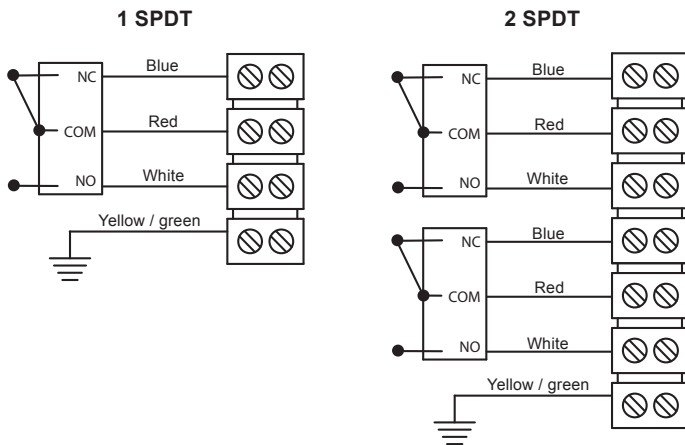

Setpoint at 50% of the scale on falling pressure

### Customer specific factory adjustment (option SETP)

The following specifications have to be given with the order:

- Setpoint value
- Adjustment on falling or raising pressure
- Deadband value (as needed) when using an adjustable dead band switch

## Electrical connections

### Hazardous areas : 1, 2, 21, 22

-20 °C ≤ Ta ≤ +70 °C	Dust IP6x	Gases
	T° surface	Class
Ta = 60 °C	80 °C	T6
Ta = 70 °C	95 °C	T5

**Important:** Maximum power dissipation in the case must not exceed 5 W

All necessary measures must be taken by the user, to avoid the calorific transfer from the fluid to the apparatus head increasing the head's temperature to such that it reaches the self-ignition temperature of the gas in which it is used.

(\*) When using 2 microswitches deadband lower values should be x1.5

<sup>1)</sup> The value of the deadband is depending on the value of the set point.

This table contains the deadband values for set point adjustment at 10% and 90% of the selected scale. For adjustable deadband the lower value corresponds to the deadband spring totally released and the higher corresponds to the deadband spring fully tensed. For other set points the deadband value can be calculated by linear interpolation between the values at 10% and 90%.
